**The Davis Clinic Announces Addition of New Minimally Invasive Surgeon,  
Dr. John Anthony Primomo, to Its All-Star Surgeon Team**

---

HOUSTON, TX – (BUSINESSWIRE) – August 3, 2010 – **The Davis Clinic, headquartered in Houston, Texas, announced today that they have signed a new surgeon to their team in order to continue to serve both the general and bariatric surgery populations in the greater Southeast region of Texas and beyond. The two parties were brought together by Memorial Hermann Hospital System.**

“Dr. John Anthony (Tony) Primomo is an exceptional surgeon who brings a wealth of knowledge and skill to our patient base,” says Dr. Robert Davis, founder and president of The Davis Clinic. “We are excited that Dr. Primomo has joined Houston’s premier surgical and medical weight management clinic, as he is dedicated to providing the highest quality healthcare services to the communities we serve. At The Davis Clinic, our goal is to provide excellence in patient care, addressing both general and bariatric patient issues while utilizing the latest in technological advances in healthcare in an environment that is both physically and emotionally nurturing.”

The facility in Houston features both surgical and medical weight management treatment options. “With the addition of Dr. Primomo to our surgeon staff, we will be able to care for more patients, allowing those that suffer with the disease of obesity to be effectively treated,” says Dr. Garth Davis, surgeon-partner at The Davis Clinic. The Davis Clinic was designed with the specific needs of the morbidly obese patient in mind.

In addition to his interest in the treatment of the bariatric patient, Dr. Primomo completed his minimally invasive surgery Fellowship at Baylor College of Medicine, obtaining expertise in reflux disease, hiatal hernia repair, and advanced laparoscopic general surgery cases.

“We think the minimally invasive surgical skills that Dr. Primomo brings to our exceptional surgical team will be of utmost interest to our patients,” says Robert Davis. “The minimally invasive approach we take with our patients allows for fewer complications, faster healing time, and a shorter recovery period. Our patients are able to have surgery and then truly get down to the business of living.”

“I am thrilled to have the opportunity to be a part of such a dynamic team and to use my experience and surgical skills to improve the health of my patients and to help them achieve their weight loss goals,” says Dr. Tony Primomo. “At The Davis Clinic, we not only facilitate improved health, but we provide true hope to our patients as well. Individuals do not have to suffer with obesity. Medical treatment is available and I’m honored that my patients share their personal journeys of transformation with me.”

The Davis Clinic continues to lead the way in surgical and medical weight management treatment options, providing exceptional care for individuals simply needing to lose a few pounds to treating individuals who are super morbidly obese.
